Chairman's Message 主席致辞

Enterprises will thrive by being thrifty, charitable, and steadfast in constantly reviewing past performance with a clear mind

On behalf of the Board, I am pleased to present the Sustainability Report of China Sunsine Chemical Holdings Ltd. ("China Sunsine", together with its subsidiaries, collectively the "Group") for the financial year ended on 31 December 2018 ("FY2018").

The Group achieved unprecedented success in 2018, thanks to the Group's consistent focus on environmental protection, safe production methods, as well as allocating huge investments in both manpower and facilities.

Environmental protection is the top priority of enterprises, as it is a basic guarantee for sustainable growth. Like all other chemical products, the rubber chemicals industry covers diverse fields such as nature, chemistry, environment, safety and humanities. While making great contributions to the society, the industry also assumes heavier social responsibilities.

As environmental protection regulations become stricter, and with people's rising desire and emphasis on environmental protection, we must set higher standards for ourselves in environmental protection, safe production, technological innovation, and green production.

We will continue to reduce energy consumption, reduce, treat and recycle waste, and eliminate hazardous waste generation. In furtherance of these objectives, we will enhance employees' awareness of environmental protection and safety, and implement strict rules and regimes to integrate sustainable development concepts into daily work routine.

While all these efforts have helped the Group in maintaining market leadership position amidst intense competition, we believe that we have a big role to play in creating more value for society. The Group is mindful of its social responsibility as well as stakeholders' interests. The Group actively fulfills its corporate social responsibilities through contributions to various charities, poverty alleviation, scholarships, and job creation. The Group also encourages employees to achieve their self-worth and ideals, delivers greater returns for its shareholders, and shares the fruits of success and experiences with peers in the industry and stakeholders. All these go towards contributing to the building of a harmonious society.

"Enterprises will thrive by being thrifty, charitable, and steadfast in constantly reviewing past performance with a clear mind". No matter how successful we are and what difficulties we are confronted with, we must keep a clear mind, remember the mission, and continue to remain true to our original mission and aspiration. Let us work together to create a better future!

Yours sincerely,

XU CHENG QIU

PRODUCTION 生产量

We have achieved rapid capacity expansion since our IPO. Total annual production capacity increased by almost five times from 26,000 tonnes p.a. in FY2007 to 152,000 tonnes p.a. in FY2018, and will be reaching 192,000 tonnes at the end of FY2019. During the year, the expansion of new Phase 1 10,000-tonnes TBBS production line has been completed in Shanxian, and the Group will commence the expansion of Phase 2 of another 20,000-tonnes TBBS production line in 2019. This new TBBS line is the first ever continuous, fully-automated and greener production line in the China rubber chemical industry, and it also achieved "zero discharge" of wastewater. Other than the capacity expansion, we continue to diversify our product range. We have reserved land space in our 5 existing production sites and are exploring opportunities to further increase our capacity. In March 2019, the Group's main subsidiary, Shandong Sunsine had entered into an Investment Agreement with Shanxian Local Government, pursuant to which the Local Government has agreed to grant Shandong Sunsine a piece of land located in Shandong Shanxian Chemical Zone, for Shandong Sunsine to carry out an investment project in phases to further expand its capacities in Rubber Chemical products, for a total investment amount of up to RMB 2.5 billion, of which RMB 1.5 billion will be invested in property, plant and equipment. With the acquisition of this land, the Group is building up another comprehensive production base to expand its production capabilities, and will further strengthen its market leadership position in the rubber chemicals industry in the world.

自 IPO 以来,我们取得了快速的产能扩张。总生产能力增长了近五倍,从 2007 年的每年 26,000 吨增长到 2018 年的每年 152,000 吨,并在 2019 年底将达到每年 192,000 吨。集团位于单县化工园区的新厂区 10,000 吨/年 TBBS 车间已建成投产,且将在 2019 年进一步扩大产能,最终形成 30,000 吨/年的生产规模,该装置在行业内率先实现了促进剂产品的连续化、自动化、绿色化生产,实现了废水的零排放。除了产能扩张,本集团继续产品范围多样化。本集团现有 5 个生产基地,并与当地政府探讨进一步增加产能的机会。2019 年 3 月,山东尚舜与单县当地政府签署了投资协议,当地政府同意出让一宗土地给山东尚舜,山东尚舜同意分批投资不超过 25 亿元人民币(其中,固定投资为 15 亿元人民币),以便进一步扩大橡胶助剂的产能,并进一步的加强集团在世界橡胶助剂行业的市场领先地位。

We have established a mid-term target to achieve the following production quantities by the 13th Five-Year Plan (i.e. by end of year 2020) for Economic and Social Development of the People's Republic of China. We aim to achieve this target by end of FY2019.

Rubber accelerators: 117,000 Tonnes
Insoluble sulphur: 30,000 Tonnes
Anti-oxidant: 45,000 Tonnes.

Our objective is to enhance our brand name and quality, and optimise our cost-structure. We will maximise the scale and efficiency of our production to maintain our current market advantage in an environmentally-friendly way. We will continue to focus on the production of rubber accelerator products and enhance our position as a global leader in this field. In addition, we aim to increase our market share of insoluble sulphur and anti-oxidant products.

In line with the strong growth in the automotive and tire industries, and coupled with our strengths in quality, large production scale, product range, cost, environmental and market leadership etc., our FY2018 total production and sales volume soared to 153,563 tonnes and 151,486 tonnes (2017: 141,704 tonnes and 140,476 tonnes) respectively. We are proud to achieve these new highs.

我们建立了中期目标 - 在"十三五"末(2020年底),实现促进剂产能 11 万 7 千吨,不溶性硫磺产能 3 万吨,防老剂产能 4 万 5 千吨,整体产能实现 19 万 2 千吨。此目标将提前至 2019 年底达成。

我们也建立了长期目标:抓住橡胶助剂的主业,巩固提升促进剂在全球的领先位置,扩大不溶性硫磺的市场规模和占有率,争取把不溶性硫磺做到全球领先的位置,扩大防老剂和预分散体的市场份额,在橡胶助剂领域树立质量、规模、品种、成本、环保、市场等综合优势,做强做大橡胶助剂主要产品。

乘着国内轮胎、汽车市场强劲发展,借助我们在质量、规模、品种、成本、环保及市场等方面的优势,集团在 2018 年度的产销量得到进一步的提高,全年产销量各为 153,563 吨及 151,486 吨 (2017: 141,704 吨及 140,476 吨),再创历史新高。

ENERGY 能源

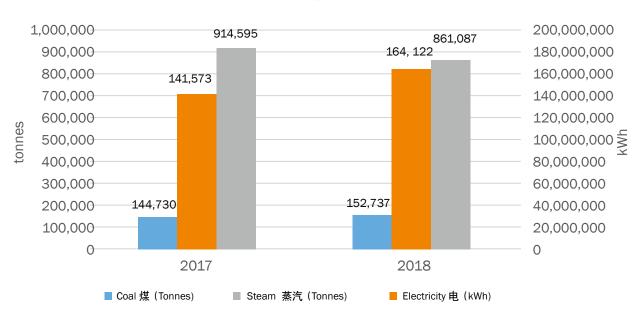

Our production facilities use coal, electricity and steam. Coal is used to produce steam required for the desiccation process.

The two tables below show our total energy consumption as well as energy consumption rate per unit. Our total energy consumption for 2018 compared to that for 2017 have increased in line with higher production volume. The increase in unit power consumption is mainly due to installation of new environmental protection devices. The unit energy consumption of steam decreased year-on-year due to an increase in production volume and implementation of steam saving measures. These demonstrated our continuous improvements in energy management.

我们加工设备需要煤,电和蒸汽作为能源动力。使用煤是为了 生产蒸汽用于供热,并用来干燥我们的产品。

下面两个图表列明了我集团 2017 和 2018 年度的总体能耗及单位能耗。2018 年总体能耗由于产量的提高而有所提高。煤的单位能耗相对 2017 年保持不变。单位电耗增加主要是因为新上环保装置耗电较多。 蒸汽单位能耗同比下降,是由于产量的提高和采取了有效的节约蒸汽措施。这些都显示出我集团在能源管理上的不断进步。

To reduce emissions, wastages and environmental pollution at Shandong Shanxian Chemical Industrial Zone, Shanxian local government authority required all companies to stop using their own boilers. And the local authority has also appointed our Group to set up a centralised heating company to provide steam and electricity to all other companies in the industrial zone. In 2013, the Group set up a centralised heating company - Shanxian Guangshun Heating Co., Ltd ("Guangshun Heating"). Total planned capacity for Guangshun Heating was 4 boilers and 3 generators (ie. 4x130t/h boiler + 3xCB12MW turbine + 3x15MW generator). The construction comprises 3 phases. Phase I of this construction, consisting of 2 boilers (1 in use and 1 on standby) and 1 generator, has commenced its operations at the end of 2013. The bulk of the steam and electricity generated by Guangshun Heating is consumed mainly by the Group, and the balance by other companies in the industrial park. Phase II of the construction to add on 1 boiler and 1 generator was completed in 2018 and has commenced operations in 2018.

In 2018, approximately 59,670,000 kWh (2017: 52,520,000 kWh) of electricity and approximately 832,789 tonnes (2017: 679,736 tonnes) of steam were generated by Guangshun Heating and consumed by the Group. (Note: The tables above include internally generated and consumed steam and electricity.)

为了减低公司所在地 - 山东单县化工业园区的排放,避免资源浪费和环境污染,单县政府要求园区内各企业停止使用自备锅炉,并委托我司成立一家集中供热公司,向园区各企业进行集中供热。2013年,集团成立了一家集中供热公司 - 单县广舜热力有限公司("广舜热力"),建设规模为"4炉3机",即"4×130t/h的循环流化床锅炉+3×CB12MW抽背汽轮机+3×15MW发电机"。其中"2炉1机"(1开1备)已于2013年底投入使用,能够生产蒸汽并发电。大部分广舜热力生产的蒸汽和发的电都在集团内部消耗,其它部分外供园区企业。2018年,二期项目的"1炉1机"的建设项目也已投入使用。

2018年,广舜热力生产的用于集团内部消耗的电力为 5,967万度 (2017年 5,252 万度), 蒸汽为 832,789吨 (2017:679,736吨)。这些内部产生并消耗的汽、电尚未在上表中剔除。

- 8、加大节能技改的力度,推广先进技术,改造落后的生产设备和余热利用,取得明显的节能效益。全年各部门及节能办共提报节能方案 38 项,已改造完毕 37 项,效果良好。

Target: WE AIM TO REDUCE ENERGY CONSUMPTION BY 4% OF THE PLANNED QUOTAS.

目标: 确保能源消耗不超定额并在此基础上下降 4%。

WATER 水资源

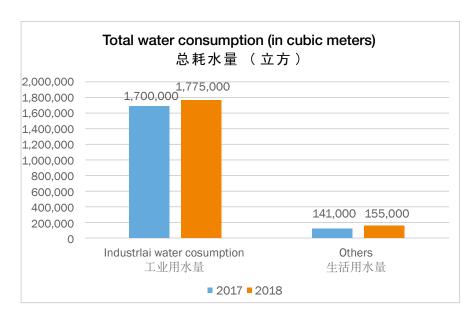

We consume a significant amount of water during production, predominantly industrial water. Industrial water is required for generating steam in order to dilute any chemicals released during production and to reduce temperatures.

在我们的生产过程中,会大量使用水。我们使用的水可分为两部分,一为工业用水,二 为生活用水。工业用水主要用来产生蒸汽, 及在工艺流程中用来稀释,水洗(物料纯化)和循环降温。

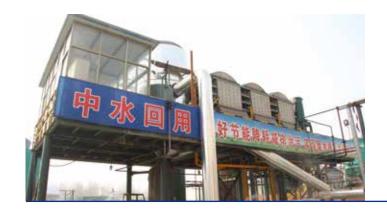

Though our water consumption is higher in FY2018 compared to FY2017, which is in line with increased production and thermal load, the water consumption per unit has reduced due to adoption of water-saving initiatives and increased use of recycled water. We remain committed to use water as efficiently as possible.

2018年的用水量同比较高,原因为2018产量较高和热力负荷增大,比2017年增加了11,859吨产量。然而,因为我们采取了节水措施,加大了中水回用量,单位耗水量同比2018年有所下降。同时,我们也承诺尽可能的有效用水。

Target: WE AIM TO MAINTAIN THE SAME LEVEL OF WATER CONSUMPTION PER UNIT.

目标:单位总耗水量不增加。

WASTEWATER RECYCLING AND DISCHARGE 废水回收及排放

All wastewater generated from the production process are pretreated and recycled for re-use. For those wastewater which cannot be recycled and re-used, further chemical reaction and bio-treatment will be done in order to comply with the discharge limits (COD \leq 500, NH \leq 35 mg/L, Aniline \leq 1.5 mg/L) set by the relevant local authority before it can be discharged to external waste water treatment plants.

Wastewater treatment has always been our focus. The Group sets out a guiding theory that is focused on the reduction of wastewater discharge, emphasises on pre-treatment, recycling as well as the bio-treatment of wastewater, and improves all employees' quality. We spare no effort in harnessing our human, technological and financial resources to ensure our wastewater discharge fulfills required environmental standards.

All our production plants are equipped with an integrated wastewater treatment and sulphur recycling facility which effectively filters wastewater produced. Our wastewater treatment and recycling process is closely monitored by the relevant local governments to comply with regulatory standards.

Since 2013 the Group has set out a "Clean Production" programme which requires every employee to play a proactive and continuous role in enhancing our products effectively. At the same time, the programme endeavours to reduce the amount of wastewater discharge and to ensure that the pollutants are removed from the water before it is released to the external environment. The measures include adopting innovative technology with advanced production processes and equipment, using better quality raw materials, and raising management skills.

We enhanced our water efficiency and encourage water conservation during the year. In FY2018, the Group discharged wastewater totalling 842,000 cubic metres (2017: 846,000 cubic metres), and waste water recycling amounted to 1,204,000 cubic metres (2017: 1,197,000 cubic metres).

所有生产过程中产生的废水都通过预处理回收使用,不能够回用的废水经过进一步的化学及生化处理,达到排放标准(COD \leq 500 mg/L,氨氮 \leq 35 mg/L,苯胺 \leq 1.5 mg/L)后排入政府污水处理厂。

公司始终将污水治理作为首要任务来抓,根据运行实际提出"抓减排、抓分别的预处理,加大中水回用,抓生化效果提高,抓环保人员整体素质提高"指导思想,不惜投入大量的人力、物力、财力,彻底实现废水的稳定达标排放。

我们每个生产基地都配备了综合废水处理和废气回收设施。在生产过程中,产生的废水可能会造成污染。废水处理厂用于处理废水,使其符合监管标准。污水处理和回收过程由相关的地方政府当局密切监测。

自 2013 以来,集团曾推行"清洁生产"计划。"清洁生产"项目需要团队成员发挥积极作用,通过技术创新,采用更先进的生产工艺和设备,使用清洁的原材料,提高管理技能,以更有效和高效的方式生产的产品,并同时减少废水排放。

由于采取节水措施,集团在 2018 年共排放废水 842,000 立方(2017: 846,000 立方),并回收废水 1,204,000 立方(2017: 1,197,000 立方)。

TARGET: WE AIM TO REDUCE DISCHARGED WASTEWATER PER UNIT AND INCREASE AMOUNT OF WASTEWATER TO BE RECYCLED.

目标: 减少单位废水排放量,增加废水回收量。

环境

EMISSION

排放

Hydrogen sulphide created during our production process is harmful to health and the environment. Our sulphur recycling facility has effectively extracted the sulphur from hydrogen sulphide for re-use in our production process, such as in the production of our thiazoles accelerator, MBT.

To effectively manage the hydrogen sulphide emission at our manufacturing facilities, we are the first company in China to invest more than RMB 30 million on a Super Claus furnace and CS2 recovery facility. Our conversion recovery rate is consistently above 99.5%.

The Group made further investments to enhance odour emissions control, as follows:

- 1. Implemented the "Feasibility Plan for Promoting Odour Control" published by the Chinese Academy of Environmental Sciences, where hydrogen sulphide generated should be categorised and analysed. RTO (Regenerative Thermal Oxidizer) incineration is used to treat highly concentrated hydrogen sulphide. RTO incineration plans will be screened and suitable plan is selected for implementation;
- 2. Installed a fully automated wastewater evaporator at MBT workshop to enhance wastewater management and recycling;
- 3. Hydrogen sulphide from MBT workshop evaporation area was collected and treated using RTO incineration. The discharged toxic gas from 4020 small and high-grade oxidation area was collected using airtight method and treated using the spray absorption process. The DZ multi-effect Fenton change tank and the mother liquid open tank were sealed and RTO incineration treatment was adopted. The feeding ports in NS1, NS2 and CBS workshops were treated using ventilation, dust removal and absorption measures;
- 4. Installed a cryogenic recycling equipment in Shandong Shengtao Chemical Co,Ltd to recycle carbon disulfide used in our Insoluble Sulphur workshop. More than 2 tons of carbon disulfide were recycled every day, achieving both economic and environmental sustainability;
- Establish a VOC ("Volatile organic compounds") action plan, focusing on leakage detection and repairs as well as to recycle these VOC.

Since 2008, we have been accredited with GB/T24001-2004/IS014001:2004 for our Environment Management System("EMS"). We have continuously enhanced our system to be more environmentally friendly over the years. Further, in 2018, we gained EMS GB/T24001-2016/IS014001:2015.

The toxic gas emission is monitored in real-time by the local Environmental Department and government authority. In 2018, we complied with the Authority's limits (S02 \leq 35 mg/m3, NOX \leq 100 mg/m3, dust concentration \leq 20 mg/m3) set for the toxic gas emission. In line with lower MBT production volume in 2018, the total volume of sulphur recycled is 11,409 tons (2017: 11,237 tons). The recycling rate remains above 99.5% (2017:99.5%). Such recycling process has reduced production cost by RMB 13.79 million (2017: RMB 13.58 million).

EMISSION 排放

在生产过程中产生的有毒废气硫化氢,对人体健康和环境有害。 我们的废气回收装置能够从硫化氢气体中回收出硫磺,此回收 的硫磺在生产过程中可以循环使用,比如在我们生产噻唑类促 进剂 MBT 和硫化剂不溶性硫磺时使用。

在废气异味治理方面作为同行业第一家,率先投资 3000 余万元上马了超级克劳斯炉和 CS2 回收装置,对公司废气进行彻底治理,转化回收率达到 99.5% 以上。

为进一步治理废气和异味, 2018年公司又实施了下列工程:

- 1. 积极结合中国环科院推进异味治理可行性方案,将厂区异味点源分类分析,拟对浓度相对较高的异味源采取 RTO 焚烧,并筛选 RTO 焚烧方案;
- 2. 在 MBT 车间废水新上了一套全自动多效蒸发器,使得车间 废水得到有效处理,实现部分回用;
- 3. 对 MBT 车间多效蒸发区域异味进行收集并引入 RTO 焚烧处理,将 4020 小高级氧化区域废气密闭收集,采用喷淋吸收工艺处理,对 DZ 多效芬顿变化罐和母液敞口罐进行了密

封并入 RTO 焚烧处理,对 NS1、NS2 及 CBS 车间的投料口采取引风除尘吸收措施治理等等;

- 4. 针对橡胶用不溶性硫磺车间二硫化碳气体,在山东盛陶化工安装了深冷回收设备,每天可回收二硫化碳2吨以上, 实现经济效益和环境效益的双丰收;
- 5. 开展 VOC 集中治理工作,源头开展"泄漏检测与修复"工作,针对 VOC 进一步收集,采用喷淋吸收等工艺回收利用。

自 2008 年, 我们获得了 GB/T24001-2004/ISO14001:2004 环境管理系统认证, 且持续改进。在此基础上, 2018 年又获得了 GB/T24001-2016/ISO14001:2015 环境管理系统认证。

在 2018 年,毒气排放量在政府允许范围内 (SO2 含量 \leq 35mg/m3, 氮氧化物含量 \leq 100mg/m3, 粉尘含量 \leq 20mg/m3)。由于 MBT 总产量的提高,2018 年硫磺的循环使用量是 11,409 吨 (2017 年: 11,237 吨),循环率高达99.5%(2017 年:99.5%)。回收硫磺经济效益达到人民币 1,379 万元(2017 年 1,358 万元)。

TARGET: OUR GOAL IS TO KEEP THE TOXIC GAS EMISSION WITHIN STIPULATED REGULATORY LIMITS.

目标: 毒气排放量在政府允许范围内。

ENVIRONMENTAL COMPLIANCE 环境合规

As set out above, we have complied with the Authority's limits for the wastewater discharge and toxic gas emission in 2018.

如上所述,我们在 2018 年的废水和废气排放量在政府规定的 限额内。

TARGET: WE AIM TO COMPLY WITH ALL WASTEWATER DISCHARGE AND TOXIC GAS EMISSION REGULATORY LIMITS.

目标: 废水废气达标排放。

OCCUPATIONAL HEALTH AND SAFETY

健康和安全

The safety of all our employees are of utmost importance. We acknowledge the production process involves dangerous, toxic or flammable raw materials. Therefore, we have implemented comprehensive safety and environmentally-friendly measures regulated by the relevant government authorities, and are subject to periodic and random checks by the authorities.

We have increased safety related expenditure to comply with regulations, and this has improved our ability to manage occupational risks posed to our employees. Constant improvements are being made to the production environment. We have upgraded our facilities related to the storage, transportation and processing of hazardous chemicals. We also provide our employees with protective equipment, safety training

and supervision in accordance with all regulatory requirements.

Safety measures and equipment are continuously deployed to ensure the safety of our employees especially during the production process. We provide safety training programmes and seminars regularly, so that our employees are updated with the latest safety measures and procedures are enhanced accordingly.

All new employees are required to undergo mandatory safety training and drills to familiarise themselves with the operation of the machinery and equipment as well as the safety precautions and procedures during the production process.

OCCUPATIONAL HEALTH AND SAFETY

健康和安全

We ensure that all our staff follow the necessary and appropriate precautions when handling harmful or toxic materials with a rigorous monitoring and enforcement process.

When it comes to education and training, strict compliance with the "production and operation unit safety training requirements" is enforced. Key position holders, from specialised personnel through to security and management staff, must attend security training, pass the assessment test and obtain the requisite certifications established by the authorities. We have also set up a training center and improved our training facilities. During the annual safety month, all employees are required to study the materials issued by the State Administration of Work Safety. At least once a quarter, our Safety Production Committee conducts research, summarises, communicates, and deploys work safety activities. The production safety workshop conducts safety briefings before and after work on a daily basis in the individual departments. This is followed by weekly meetings arranged by the Safety Department for the management to review the previous week's production safety status, and identify focus areas for the following week.

We have established a comprehensive emergency response plan and registered this with the City Safety Supervision Bureau. All workshops and departments have appointed emergency response units which are equipped with all necessary equipment. We conduct annual safety drills to improve employees' operational readiness to manage any emergencies or safety incidents.

The General Manager personally heads the safety function. He is supported by the department managers and the workshop supervisors. This arrangement ensures that all leaders are aware of their dual responsibilities over management and safety. We have also appointed a Safety Director, a Production and Safety Committee, and a Production and Safety Department.

We have an Annual Internal Safety Inspection Plan. The local authority conducts inspection once or twice a month. We continuously carry out safety management activities, such as the management of liquid chlorine, liquid ammonia and other hazardous chemical materials. These also include frequent maintenance inspection and regular monitoring of specialised operational processes. Our Production Safety Department conducts a review every Friday. Random safety inspections are conducted in the workshop every day. Each workshop also carries out a review in accordance with the Production Line Safety Checklist. Self-assessment is performed to identify any hidden safety issues in order to improve safety risk management. In addition, we engage two production safety experts from Heze City to objectively review our production safety management system annually. Their coverage includes safety policies, site management, production technology, equipment and any other related aspects.

In 2018, we have reviewed and updated the "Safety Assessment Rules", and issued "Safety Cap Use Manual", "Contractor Safety Management Policy" and "Risk Classification and Management Policy for Production Safety ". These further enhanced the production risk control and management system in the Company.

We have enhanced the risk management system and safety procedures covering special operations using fire, operations at confined space, high-altitude operations, inspection and maintenance process, and hazardous chemicals handling process, etc. During the year, we ensured the safety operation of these operations in all workshops.

We also made an effort on implementation of diagnosis activities for the design issues of production facilities in plant area, to ensure that the safety spacing and equipment layout of the production facilities conform to the safety requirements.

During the year, revision of the emergency plans and expert review of the plans were completed, and relevant documents were submitted to County Safety Supervision Bureau. In addition, we actively fulfilled the request of the County Safety Supervision Bureau by completing the drills for the comprehensive emergency plan for hazardous chemicals.

In 2018, we further enhanced our risk management system in terms of Risk Classification & Control Management and Risk Prevention and Detection of potential safety hazards. Relevant trainings were conducted for "Risk Classification and Management Policy for production risks". On 28 March 2018, we passed the review and assessment conducted by Heze Safety Supervision Bureau.

Since 2008, we obtained the occupational health and safety management system GB/T28001/OHSAS18001 certification, and have continuously strengthened our production safety system to be more advanced, practical and effective.

化学品管理

We have strengthened our on-site chemical management, especially in high risk areas such as the transfer of materials, to minimise any unnecessary exposure to hazardous chemicals. Our approval process for chemical products, in particular, the screening of highly hazardous chemicals have become more stringent. Where possible, we try to replace such hazardous materials with less hazardous materials in our production line. Approval must be obtained for any exceptions from the relevant Group Technical Authority.

We have enhanced the safe storage of hazardous chemicals through the installation of the following systems and facilities:

- · high and low liquid level alarm system
- emergency cut-off for the automatic chain
- combustible and poisonous gas leakage alarm system
- · provide air respirator
- · provide chemical protective clothing.

To enhance safety, the production team and chemical handling units are required to comply strictly with the established operating procedures through every step of the production, transportation and storage of hazardous materials. Staff are also required to be familiar with emergency response plans.

我们加强了现场化工产品管理,减小对健康影响的可能性。化工产品审核批准的流程更加严格,对高危险的化学产品需要安全筛选,并且进行替代评估。任何不足需要得到相关的审核批准。

对高危险的化学产品管理会在将来进一步加强, 特别是在高风 险区块, 如在原材料转换时。

公司加强各危险化学品罐区安全管理,增设高低液位报警、紧急切断自动连锁、可燃、有毒有害气体泄漏报警、空气呼吸器、防化服等安全设备设施及应急器材。严格危险化学品卸车作业过程管理,严格按照卸车作业规程操作,加强监督检查,确保危险化学品卸车环节安全。危化品生产和使用部门进一步完善相应的工艺操作和安全操作规程,并严格要求生产和使用危化品的操作人员,必须严格遵守工艺操作规程、安全操作规程,熟悉物品性能和应急处理方法,确保各车间危险化学品的生产、使用安全。
